

Take-home: Fix the API docs

Take-home assignment

The scenario

Our published StyleZone API documentation has drifted out of date, and customers keep tripping over the gaps.

What we'd like you to do

- Treat the running API in the pack as the source of truth. Work through the draft reference and find where it no longer matches how the API actually behaves.
- Correct the documentation, and add a short working example (a `curl` command and/or a code snippet) for each endpoint — one you've actually run.
- Keep a brief note of what you changed and how you confirmed each fix.
- **To finish, a short thought exercise (no code needed):** documentation drifts because nothing keeps it in sync with the API. How would you stop this recurring — what would you build or change so the docs stay honest going forward? Capture your thinking in your notes; we'll dig into it on the call.

What's in the pack

A draft reference document and a small runnable copy of the API.

Use AI — we want you to

This role uses AI coding agents every day (Claude Code, Codex, and similar), so please use them here too. We're interested in how you direct them and how you check their output — so include a short note on how you used AI and anywhere you chose not to trust it.

Time

You have **48 hours** from when you receive this pack. It's designed to take about 1.5–2 hours of focused work — please don't over-invest. We care about your thinking, not polish.

The follow-up call

After you submit, we'll schedule a ~45-minute call where you walk us through what you built and your thought process. It's a relaxed, collaborative conversation — we'll ask why you made certain choices and may try a small change together. No gotchas.

What to submit

Send us a zip or a link to a git repository with your work and a short notes file. Instructions for running the provided API are in the pack.

Ground rules

Everything runs on mock data — you won't need any Browzwear accounts or production access, and nothing you build here will be shipped. Questions are welcome; asking good ones is a plus.
